Development Solutions

**Trusted Partner and Global Supplier of Solutions to Diagnostics,
Clinical Research and Life Science Industries for over 30 years**

GOLD STANDARD QUALITY CONTROL

Controls and reference materials for infectious disease testing are the cornerstones of SeraCare's QC business. SeraCare has provided gold standard third-party run controls and reference materials to clinical laboratories for more than 30 years.

This decades-long experience in the manufacture and design of third party controls ensures you're receiving best-in-class products to support clinical lab QC programs, every time.

THE VALUE OF INDEPENDENT CONTROLS

Independent quality controls offer a cost-effective insurance policy against critical testing failures and the costly cycle of troubleshooting, downtime, test repeats, and sendouts.

Regulatory agencies consider them an essential part of any clinical lab quality control program.

**“The laboratory shall design
quality control procedures
that verify the attainment of the
intended quality of results.”**

ISO 15189:2012 5.6.2.1 - Medical Laboratories -
Requirements for quality and competence

THE BENEFITS OF ACCURUN

- Increase confidence by rigorously challenging your assays
- Mitigate the risk of reporting false results
- Catch declining assay performance in advance of catastrophic failures
- Reduce repeat testing due to errors
- Enhance your assay troubleshooting capabilities
- Improve the monitoring and management of your QC processes

FOUR REASONS NOT TO RELY ON INSTRUMENT MANUFACTURERS' CONTROLS ALONE

1

Manufacturer controls are often formulated from the same raw materials as the assay calibrators, and thus mimic the calibrators' performance.

2

Manufacturer controls are typically high-positive controls, which will not challenge the assay at lower detection limits where the medical decision point lies.

3

Manufacturer in-kit control lot changes tend to be frequent, making long-term monitoring of the assay difficult.

4

In general, manufacturers' controls are optimized for use with the manufacturer's test system, and thus are less likely to identify assay performance issues.

THE LEADER IN THIRDPARTY LOW-POSITIVE CONTROLS FOR INFECTIOUS DISEASE

The truest test of an assay's performance is at the lower limits of detection, near the clinical decision point — the boundary between a positive and negative result. This is where even a modest degradation in performance can produce the catastrophic consequence of a false patient result.

Unfortunately, many manufacturers' in-kit controls and third-party commercial controls are not designed to detect subtle performance changes at these lower detection limits.

SeraCare's ACCURUN controls are specially formulated to exhibit weak reactivity in true patient-like matrices to pressure-test assay performance near critical clinical decision points.

ACCURUN independent controls offer sensitive detection of subtle shifts in testing trends and mitigate the risk of reporting false results.

“Use of independent third party control materials should be considered, either instead of, or in addition to, any control materials supplied by the reagent or instrument manufacturer.”

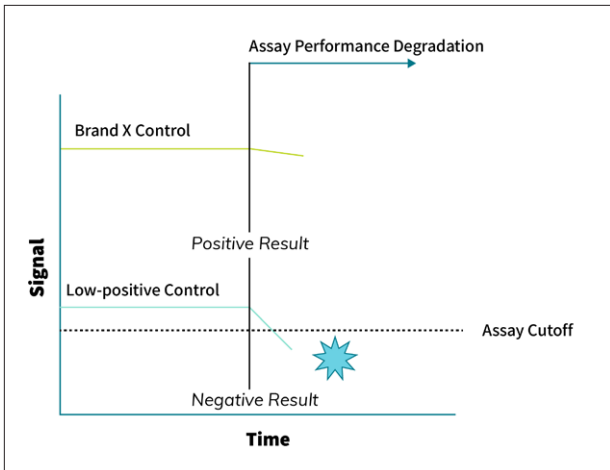

ISO 15189:2012 Section 5.6.2.2 / Medical Laboratories – Requirements for quality and competence

QUALITY AND RELIABILITY

Confidence in your assay results starts with quality controls you can trust. Our facilities are ISO 13485-certified and follow cGMP regulations. This means our products are traceable from sourcing through delivery — ensuring consistent, high quality QC materials that you can depend on for sensitive daily monitoring of assay performance, providing confidence that reported results are accurate.

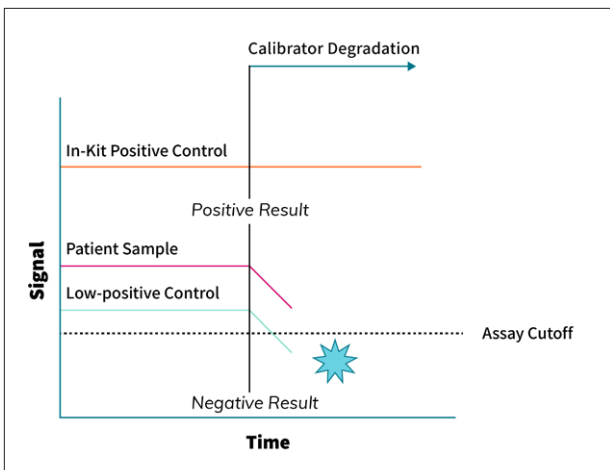

ACCURUN CONTROLS CHECK ALL THE BOXES:

- **CLINICALLY RELEVANT RANGES:** Specifically designed to be weakly reactive, low-positive controls, ACCURUN truly challenges an assay's performance at critical decision points.
- **PATIENT-LIKE MATRICES:** ACCURUN controls are formulated to mimic authentic patient samples, as encountered in a daily testing environment.
- **FULL PROCESS:** Whole virus/organism controls are designed to detect failures at every stage of the testing protocol — from sample prep to detection.
- **LOT TO LOT CONSISTENCY:** SeraCare produces large lot sizes under cGMP and ISO 13485 conditions. This ensures availability of bulk quantities of a single lot for long-term QC monitoring.
- **EXTENDED SHELF LIFE:** ACCURUN controls are stable for at least 18 months from date of manufacture.
- **OPEN VIAL STABILITY:** Once opened, ACCURUN serology controls are stable for at least 60 days.
- **EASE OF USE:** Controls are offered in ready-to-use liquid format, enabling streamlined lab workflows.

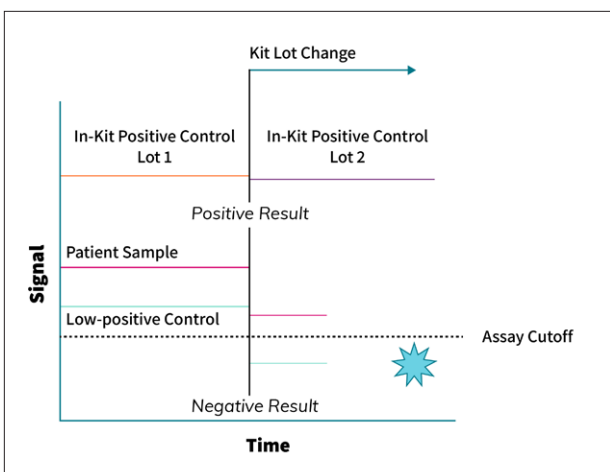

SCENARIO 1

Over time, an assay’s performance begins to degrade, resulting in reduced sensitivity to the target analyte. Brand X control was designed with a high analyte concentration; despite the performance degradation, control values do not shift significantly and continue to deliver strong positive results. In contrast, the ACCURUN control — formulated near the clinical cutoff value in a patient-like matrix — exhibits a rapid shift in reported results, drifting toward negative values. This provides advance warning to the lab that there’s a problem with the assay.

SCENARIO 2

The calibrator provided in an IVD assay kit has begun to degrade, but this change is not detected by the in-kit positive control, as it was formulated with similar raw materials and designed to work specifically with the manufacturer’s assay system; thus, the in-kit control mimics calibrator trends. In contrast, the ACCURUN control immediately identifies the shift in assay performance, alerting lab personnel of a problematic trend that needs to be corrected before patient results are impacted.

SCENARIO 3

A clinical lab has switched to a new lot of a manufacturer’s assay kit. The new kit lot exhibits reduced sensitivity, but this change is not detected by the in-kit positive control, as it was used to determine the cutoff value for the new lot. Because the ACCURUN control was independently manufactured and utilized for long term QC monitoring over many assay kit lots, it picks up the significant shift in sensitivity. Without the use of the independent ACCURUN control, patient results may have been compromised.

ACCURUN SEROLOGY CONTROLS

- Single and multi-marker independent controls
- Human-sourced controls that mimic true patient samples
- Specifically formulated as low level positive controls
- Ready-to-use liquid; stable at refrigerated temperatures

Avoid false-positives and false-negatives with ACCURUN serological controls in your assay. Our controls help monitor and troubleshoot test methods to isolate system errors in your laboratory. As a leader in lower limit-of-detection controls, we provide the tools to challenge your assay closer to the assay cut-off, giving confidence in your serology test results.

ACCURUN MOLECULAR CONTROLS

- Whole-cell or whole-organism third party control
- Mimics a patient sample to monitor entire test performance from extraction to detection
- Weak reactivity to challenge your test performance
- Ready-to-use in various sizes
- Consistency lot-to-lot; large lot size availability

Monitor all aspects of your molecular test with a full-process independent control that truly challenges assay performance. ACCURUN molecular controls mimic patient samples and enable monitoring of the entire testing process, from extraction through detection. As a leader in low-positive controls, we provide the tools to challenge your molecular assay near the limit of detection, enabling superior detection of assay variability.

About SeraCare, Part of LGC Clinical Diagnostics

SeraCare offers a comprehensive portfolio of reference materials for oncology and reproductive health, designed and manufactured to meet the precision demanded by NGS assays. The portfolio includes high quality ground-truth RNA, ctDNA and genomic DNA-based reference materials that are NGS platform agnostic for tumor profiling, immunoncology, liquid biopsy, NIPT and germline cancer assay workflows.

SeraCare is now part of LGC Clinical Diagnostics, Inc. LGC Clinical Diagnostics develops and manufactures over 3,650 catalog and custom-developed diagnostic quality solutions and component materials for the extended life sciences industry. We partner with IVD assay developers, and pharmaceutical, CRO and academic institutions in commercialization activities across the entire diagnostic pipeline – from concept and early stage research, through expedited product development and onwards into routine clinical use. Laboratory and diagnostic professionals across disciplines of clinical chemistry, immunochemistry, serology, molecular diagnostics, and clinical genomics rely on LGC's products to support accurate and reliable diagnostic results.
