ACCURUN® 2 Series 2900

Multi-Analyte Positive Control

For the Abbott ALINITY S Instrument

ACCURUN 2 Series 2900 Multi-Analyte Positive Control is formulated for use with *in vitro* diagnostic test kits for the qualitative determination of anti-HIV 1/2, HBsAg, anti-HCV, HBc, anti-treponema, anti-HTLV I/II, and anti-CMV.

ACCURUN controls are specially formulated to exhibit weak reactivity in true patient-like matrices to pressure-test assay performance near critical clinical decision points. ACCURUN independent controls offer sensitive detection of subtle shifts in testing trends and mitigate the risk of reporting false results.

Low-Positive Controls
Specifically designed to be weakly reactive, low-positive controls, ACCURUN truly challenges an assay's performance at critical decision points.

Patient-Like Matrices
ACCURUN controls are formulated to mimic authentic patient samples, as encountered in a daily testing environment.

Third-Party/Independent
ACCURUN controls are designed to deliver an independent and unbiased assessment of performance.

Lot To Lot Consistency
Produced in large lot sizes under ISO 13485 and cGMP conditions, ACCURUN controls can be used for long-term QC monitoring.

Extended Shelf Life
ACCURUN serology controls are stable for at least 18 months from date of manufacture and at least 60 days once opened.

Ease of Use
Controls are offered in ready-to-use liquid format, enabling streamlined lab workflows.

Material No.	Kit Size	Matrix	Analytes	Regulatory Status
2000-0080	6 x 3.5 mL	Human Serum or Plasma	anti-HIV 1/2, HBsAg, anti-HCV, HBc, anti-treponema, anti-HTLV I/II, anti-CMV	CE-IVD
